

ABRASAVE® TMT-EZR FIXTURE LINE

P/N PFC-TMT-EZR8-24 OR PFC-TMT-EZR8-12

Designed for Maximum Efficiency

The TMT-EZR Rapid Clamp from Domaille Engineering is specially designed to reduce loading time, while minimizing protrusion height variation, maximizing yields and extending polishing film life.

The TMT-EZR Rapid Clamp system is designed around our patented MT-EZ clamp that has 15+ years of proven excellence. It was redesigned for optimized clamping of the TMT ferrule and has been incorporated into the 12 & 24 Port AbraSave® TMT Polishing Fixtures.

Benefits at a Glance:

- Rapid Clamp Actuation for Maximum Efficiency
- Visual Indication of Clamp Engagement
- No tools to locate, maintain or replace—instant cost savings
- Reduced operator fatigue
- Designed to minimize protrusion height variation in TMT/MMC connector polishing
- Available in straight or angled configurations
- Reduced clamping force with constant spring pressure to minimize clamping distortion
- Cable management devices available to further control process
- Patented MT-EZ Clamp System, US Patent 7,738,760
- Patented MT-EZR Latch System, US Patent 11,326,630 & 11,493,067
