

APM-HDC-2500

OPTICAL FIBER POLISHING MACHINE

**Intermediary machine
specially designed for a
minimalistic approach to
fiber polishing**

An alternative option to our top tier model polishing machine which provides your basic polishing needs. Still designed and built with Domaille Engineering caliber and precision, this polisher delivers the highest quality output. It's touchscreen interface also allows ease of use which continues to provide many necessary user options for polishing all connector types.

Machine Features:

- PC Based system with 7" color touchscreen display
- Usable with Domaille Standard Fixtures
- Force programmable in .1 lbs. increments up to 20lbs for ultra-precision control
- Stores up to 9 polishing processes
- Process can accommodate up to 5 polishing steps
- Auto force reduction for partial load
- 10-200 RPM platen speed with feedback control
- Force calibration option
- Password protected process parameters
- Accommodates standard drip tray and splash guard
- Supports 4 foreign languages
- Smaller footprint with similar functionality as top model
- Made with same precision as all DE models.
- CE rating in process
