Stops Rubber Pads from Slipping!

Domaille Engineering's EZ-Lock rubber pad anti-slip system is an integral part of the process control system. It features a specially modified optical fiber polishing machine platen paired with a Gold Series rubber pad. Keyed features securely lock the rubber pad in place, effectively preventing pad slippage during the polishing process.

Benefits at a Glance:

- Special designed optical polishing machine platen with locking studs
- Domaille Gold Series rubber pad modified with special keying features
- Compatible with Domaille Glass Plates
- No wringing of pad to platen is necessary
- Can be retrofitted to any Domaille Engineering optical fiber polishing machine

Manufactured to Domaille's exacting high quality standards
